

Position Description

Vacancy Title: **IT / Geospatial Analyst Programmer**

Location: **Suva**

Objective

The role of the IT / Geospatial Analyst Programmer is to analyze, design, implement and maintain both in house, outsourced applications and various technologies on project managed by the IT department. The incumbent will be expected to deliver against the key accountabilities above and perform other tasks required of them as directed by IT Coordinator Projects / IT Coordinator

Outcomes

Organisational Stakeholders

1. IT Operational Services Provided

- Review of system procedures and business process re-engineering assisted. .
- TLTB system Report for External Parties prepared. .
- TLTB system Reports for TLTB Staff Member prepared.
- Review of TLTB System Procedures assisted.
- GIS link to TLTB System ensured
- Software vendors assisted in their maintenance visits.
- Information for Annual Accounts Reports provided.
- Implement specific tasks as directed by MIT.

2. Applications/Software/Servers Development, Support, Maintenance and Documentation

A) Development

- Development of applications, web applications using Microsoft development tools and any other development language, user interface design, Windows programming, client/server development and component design, and business processes to TLTB infrastructure.
- GIS applications that integrates with TLTB database management system developed to improve current Lease application process
- Web mapping applications developed to enhance Planning and Geospatial analysis
- Middleware and APIs for integration of cloud storage developed or application with on premise applications ensured.
- ArcGIS enhancements developed to automate some process for Geospatial through the system
- Assistance provided in the Development of TLTB System functions.
- Assistance provided in the Development of innovative solutions and enhancements.
- To design and develop database systems in both MS Access and SQL Server ensured.
- Design of company WebPages, including graphics, animation and functionality ensured.

B) Support & Maintenance

- ArcGIS Server and Database online and available for Geospatial services ensured.
- New workflows based on data, analysis, developer and end user requirements followed and suggested to Geospatial Coordinator
- Test, debug and document software developed both internally and externally.
- SQL Server Replication maintained.
- Audit functions on TLTB Systems checked.
- Customization of TLTB Website as well as Integration of third party products with TLTB existing technology ensured.
- The human interface to applications will be consistent across all applications ensured.
- Server Problems supported (SQL, Windows 2012 Server, Exchange Server, etc).
- The organization's software application requests supported, including assisting in the extraction of data for reporting.
- TLTB System, other TLTB specified Applications maintained and supported.

C) Documentation
